**Overview**

Schneider Electric Software, LLC (“Schneider Electric”) has created a security update to address vulnerabilities in

- InduSoft Web Studio v8.0 SP2 and prior
- InTouch Machine Edition v8.0 SP2 and prior

The vulnerabilities, if exploited, could allow an un-authenticated malicious entity to remotely execute arbitrary commands with high privileges.

Schneider Electric recommends that organizations evaluate the impact of these vulnerabilities based on their operational environment, architecture, and product implementation.

This security bulletin announces the software security updates for

- InduSoft Web Studio v8.0 SP2 and prior
- InTouch Machine Edition v8.0 SP2 and prior

---

**Recommendations**

Customers using **InduSoft Web Studio v8.0 SP2 or prior** are affected and should upgrade and apply **InduSoft Web Studio v8.0 SP2 Patch 1** as soon as possible.

Customers using **InTouch Machine Edition v8.0 SP2 or prior** are affected and should upgrade and apply **InTouch Machine Edition v8.0 SP2 Patch 1** as soon as possible.

---

**Background**

InduSoft Web Studio is a powerful collection of tools that provide all the automation building blocks to develop HMIs, SCADA systems and embedded instrumentation solutions. InTouch Machine Edition is a highly scalable, flexible HMI designed to provide everything from advanced HMI applications to small-footprint embedded devices. InduSoft Web Studio and InTouch Machine Edition are used in many industries worldwide, including Manufacturing, Oil and Gas, Water and Wastewater, Building Automation, Automotive, Wind and Solar Power.

To identify the version of InduSoft Web Studio you have installed, navigate to Windows Programs and Features, locate “InduSoft Web Studio” installation and check the installed version.
Vulnerability Details

InduSoft Web Studio and InTouch Machine Edition provide the capability for an HMI client to trigger script execution on the server for the purposes of performing customized calculations or actions. A remote malicious entity could bypass the server authentication and trigger an arbitrary command to be executed. The command is executed under high privileges and could lead to a complete compromise of the server machine.

Security Update

The following Security Updates address the vulnerabilities outlined in this Security Bulletin.
Sept 15, 2017: InduSoft Web Studio v8.0 SP2 Patch 1
Sept 15, 2017: InTouch Machine Edition v8.0 SP2 Patch 1

Affected Products, Components, and Corrective Security Patches

The following table identifies the currently supported products affected. Software updates can be downloaded from the Global Customer Support “Software Download” area or from the links below:

Vulnerability Characterization and CVSSv3 Rating

CWE-306: Missing Authentication for Critical Function

Acknowledgements

Schneider Electric would like to thank:
- Aaron Portnoy formerly of Exodus Intelligence for the discovery and responsible disclosure of this vulnerability.
- ICS-Cert for coordination and advisories.

NVD Common Vulnerability Scoring System (CVSS v3)

The U.S. Department of Homeland Security has adopted the common Vulnerability Scoring System (CVSS v3) that provides an open framework for communicating the characteristics and impacts of IT vulnerabilities. CVSS v3 produces a numerical score as well as a textual representation of that score reflecting the severity of a vulnerability. Scores range from 0.0 (no impact) to a maximum of 10.0 (critical impact with minimal effort to exploit). For additional information please refer to the CVSSv3 specifications.
